Senior Web Engineer (Full-Stack developer) job description

25 November 2022

Senior Software Engineer (Full-Stack developer)

We'd like to meet an engaged, passionate and business oriented engineer to join the YOUniversal Information Technology team and help us raise our goals; code lovers who are experienced enough to know that for any given technical solution the execution is a key factor for success.

We try to be focused on data and metrics in order to find the best way to reach our goals and to understand how our business constantly changes.

Our development team approaches its work with a mix of Scrum and Kanban.

The **Senior Software Engineer (Full-Stack developer)** will be responsible for:

- implementation and maintenance of:
    - advertising landing pages
    - internal web based tools
    - traffic tracking
    - reports:
        - external data import and ETL
        - internal data export via API, email, and so on
- traffic analysis
- support Digital Marketing and Business Development teams in understanding their needs and in finding/implementing solutions that help them to reach their goals.

Requirements

What you should have to fit the role:

- clear understanding of fundamental computer science and software engineering concepts (e.g. design patterns);
- OOP in PHP and Laravel environment are your comfort zone;
- good knowledge of Python (it is the place where you want to be tomorrow);
- very good knowledge of frontend technologies and frameworks (Vue.Js, React, Node.js, webpack, Sass, Less, etc);
- good understanding in vanilla JavaScript;
- strong expertise with relational databases (MySQL) and ORM (Eloquent)

- understanding of not relational database;
- practice with Ajax;
- experience in working with API SOAP, JSON and custom;
- good knowledge of Linux based OS;
- good spoken and written level of English.

A plus will be the knowledge and/or experience of/with:

- Amazon Web Services;
- containers;
- unit and functional testing and experience with TDD;
- agile principles and best practices such as peer review, pair programming, etc;
- bash;
- Tableau;
- Jira;
- having worked in a company with the same business or ours.

What we offer

- Remote smart working. Meetings in our headquarter in Rome are arranged periodically (at least once a week for people coming from our Region);
- nice and enthusiastic team to work with;
- multicultural environment;
- possibility to face with and understand a stimulating business word;
- ticket restaurant;
- fair salary package commensurate with your experience.
